

# Next Generation Aquaculture Planning

## **NOAA'S OCEAN SERVICE SUPPORT FOR SUSTAINABLE AQUACULTURE IN THE U.S.**

Steve Thur, PhD

Director

National Centers for Coastal Ocean Science

July 18, 2018

# Purpose

- *To provide an overview of NOAA's integrated aquaculture program as it stands today with particular focus on NOS/NCCOS.*
- *To explore how NOAA's integrated aquaculture program partners can assist the SAB in developing their aquaculture work plan*

# Key Issues for SAB

- NOS aquaculture role relative to NMFS and OAR
- Importance of science-based siting for sustainable aquaculture expansion
- Intersection with ecological forecasting (e.g. for HABs and pathogens)

# NOAA Aquaculture Program

## Oceanic and Atmospheric Research

Funding for research, extension and education  
Technical support to small businesses  
Great Lakes aquaculture research  
Legal research on permitting in state waters

## National Marine Fisheries Service

Funding for research and development  
Coordination across regional science centers  
Aquaculture regulation and policy  
Outreach and education support

## National Ocean Service

Spatial planning and siting  
Environmental monitoring  
Environmental modeling  
Ecosystem services

## NOS Aquaculture Role

- Coastal Planning and Siting
- Environmental Interactions (modeling, monitoring, forecasting)
- Ecosystem Services (e.g. habitat, water quality, C sequestering)

# Spatial Planning

## Why we need spatial planning for aquaculture

- Reduces use conflicts
- Ensures environmental protection
- Streamlines permitting
- Increases investor confidence

## How we use spatial science

- Provide geospatial data for industry/coastal managers
- Delivers publically available map viewers
- Alternative siting analyses for commercial projects
- Regional planning (aquaculture development areas)
- National planning (economic opportunity analyses)

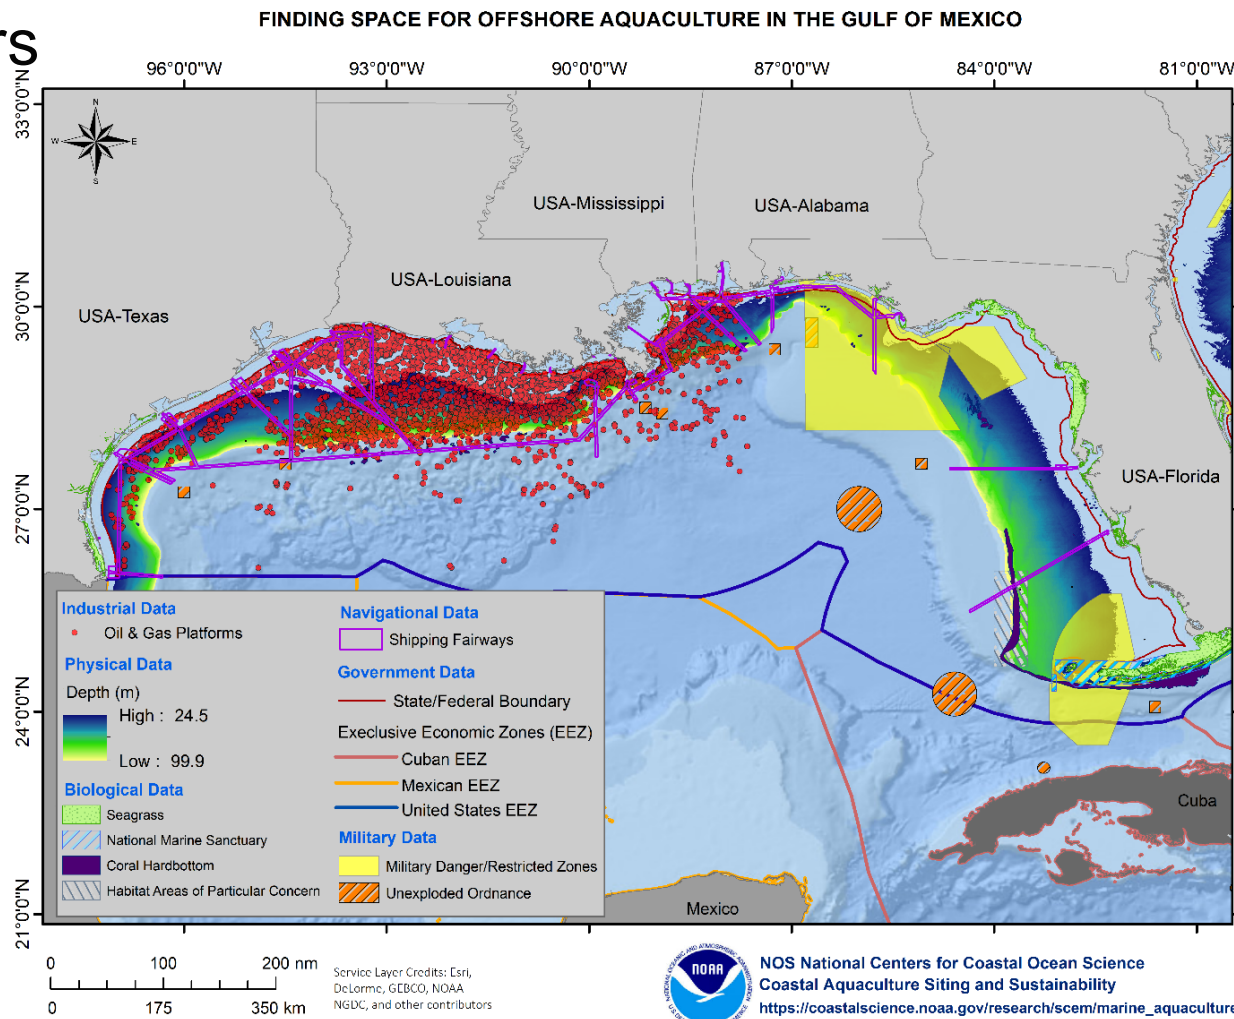

# Spatial Planning Tools

## The Gulf AquaMapper

- Over 65 data layers
- Navigation
- Industries
- Natural resources
- Oceanography
- Military zones

# Environmental Modeling

## What models do...

- Allow precision siting
- Predict impacts
- Inform farm planning
- Alert regulatory community
- Reduce concerns
- Provide due diligence

# Wave Modeling to Inform Aquaculture Siting

# On Demand Spatial Planning

## Ocean Reporting Tool

- General profile
- Energy and Minerals
- Natural Resources and Conservation
- Transportation and Infrastructure
- Biophysical and Oceanographic

### Report Area ⓘ

The total size of the geographic area for an activity may not always be a good indicator of the geographic scope of possible effects. There may be cumulative, temporal, or transient effects overlapping or beyond the reported geographic area.

mi<sup>2</sup> 9,961.654  
nm<sup>2</sup> 7,522.244  
km<sup>2</sup> 25,800.566

### Principal Ports ⓘ

DISPLAY ON MAP ☐

Southeast ports represent 13 of the top 150 ports for the nation based on total tonnage for the year. Certain offshore projects may require a large port to conduct transactions.

2 Closest

9.92 miles

18.35 miles

Turbidity  
Chlorophyll *a*  
DO

# Ecosystem Services

## Ecosystem

- Habitat for finfish & shellfish
- Increased production
- Stabilize shorelines
- Eutrophication reduction
- Improved water clarity

## Economic/Social

- Harvestable Seafood
- Jobs
- Working waterfronts
- Food security
- Cultural resource

# NOAA Coordination

## Coordination with:

- DOE ARPA-e program
- NMFS Office of Aquaculture
- OAR Sea Grant
- NOS Office for Coastal Management
- Bureau of Ocean Energy Management
- The Nature Conservancy

## Major Customers:

**US Army Corps  
of Engineers®**

# Desired Outcome

*A fully integrated and effective NOAA Aquaculture Program that builds on the strengths of current multi-line office efforts to advance domestic aquaculture production.*

*This requires:*

- *Engaging the external research and technology development community on aquaculture.*
- *Ensuring a robust NOAA laboratory backbone.*
- *Initiating regional pilot projects with university, federal and industry scientists to address critical science gaps.*
- *Enriching workforce training and education.*

# Desired Outcome

## *Specific Requests of the SAB:*

- *Review and input on 1st draft of SASP in January 2019*
- *Assistance in defining the most impactful investments of federal aquaculture funds and efforts to develop the most useful partnerships with industry.*
- *Assistance in communicating the role of NOS in aquaculture:*
  - *Coastal Planning and Siting*
  - *Environmental Interactions (monitoring, modeling, forecasting)*
  - *Ecosystem Services (e.g. water filtration, carbon sequestering).*
