

BACKGROUND

- **Traditional Public-Private Partnerships focus on financing**
 - Road construction where a private partner assumes risk of cost overruns in exchange for the revenue stream from tolls
- **We are building our report around non-monetary models**
 - Monetary P3 models are already well-developed
- **We identified six types of non-monetary P3 applications available to NOAA**

NON-MONETARY P3 MODELS

- **Shared technology development**
- **Transition of technologies NOAA develops into routine application**
- **Clarifying NOAA's role, empowering private investors to fill available niches**
- **Collaborative data collection**
- **Engagement in public decision processes**
- **Workforce development**

PRODUCTS WE WILL PRODUCE

- **10-15 page report describing range of P3 mechanisms available to NOAA**
 - Single-page executive summary of findings and recommendations
 - Body of report will include a section for each mechanism
- **For each mechanism we will cover four topics:**
 - Description of how NOAA is presently employing that mechanism
 - Opportunities for expanding within each mechanism
 - Potential pitfalls within each type that NOAA should seek to avoid
 - Constraints to implementation that NOAA needs to overcome
- **We will also produce an accompanying PowerPoint presentation**

PROCESS

- **We are starting with the first three mechanisms**
 - Not enough people to do all of them at once
 - Start with the mechanisms people felt had the most opportunity for suggestions
- **Divide and conquer**
 - Created a three-person subcommittee for each mechanism
- **Interviewing people who have had experience with each mechanism**
 - Including staff within NOAA

TIMING

- **The subcommittees will work separately for another two months**
- **Reassemble as a large group to vet and integrate the individual findings in October**
- **Verbal presentation of draft findings/recommendations for SAB feedback at our November meeting**
- **Draft written report for SAB consideration at our spring meeting**

QUESTIONS FOR YOU

- **Are there people we should be talking with?**
 - Do you know of particularly good (or bad) examples?
- **Anyone else like to join us?**
 - We lost two members and could use some more
- **For NOAA leadership: Are we headed in the right direction?**
 - Will the things we are planning to produce be helpful?
 - Any detailed questions you would like us to address?
